

About ENGAGE

ENGAGE is an EU-funded project, which started in July 2020, whose mission is to provide novel knowledge and identify impactful solutions for exploiting Europe's societal resilience.

Since our world is increasingly exposed to higher risks and hazards, individuals and civil society need to maintain the ability to respond to these threats swiftly. ENGAGE addresses the whole of society and tries to bridge different ways of intervention across communities to enhance their capacity to respond to disasters jointly and thus improve their societal resilience.

The identified solutions will aim at bridging the gap between formal and informal approaches to risk and emergency management, increasing the ability of communities to adapt before, during and after disasters.

What is the Knowledge Platform?

The Knowledge Platform is an interactive web platform dedicated to the topic of societal resilience. It hosts the Catalogue of Solutions, a repository of solutions to improve the interaction between emergency responders, authorities and civilians in emergency situations.

Who can use it?

The Knowledge Platform is intended to be used by first responders and public authorities, who can use the platform to find solutions which can be tailored to their specific contexts.

What are the benefits of using the Knowledge Platform?

When using the platform, the user can find information on societal resilience as well as a model for assessing societal resilience. This can facilitate a better understanding of the concept itself and how it can be integrated into the field of practice by disaster managers when planning for a crisis and managing crisis situations.

The Knowledge Platform also hosts the Catalogue of Solutions, which can be used as a source of inspiration for the user to develop or adopt their own tools and practices to enhance their collaborations with citizens before, during, or after a crisis.

How can I use the Catalogue of Solutions?

By using filters or keywords, the user can search the Catalogue of Solutions for tools, technologies, or strategies that can help address their specific needs. Based on this input, the user is presented with a visual overview of the solutions that best fit their needs.
